

~~hi~~ hi, hi, hi, hello, hello, hey

hi - 3 ← inc, dec using map

hello - 2

hey - 1 → max count return one of the key
with max count.

if we could make a map which sorts itself
based on given input

But we want value to be the deciding
factor which is not possible.

Hence we create another TreeMap whose
key is counting number whose respective value
is a set of List's with same key count.
